

get together

Here you don't just work on projects. Here you are also working on the future.

More mobile, more flexible, more communicative: the way we work is changing more and more conspicuously. One reason is social change. New technological possibilities and more open social structures influence the way we interact with each other – and thus also how we work together.

Bench working, i.e. working together at one large table, reflects these developments. Whether temporary work (hot desking), event-driven use by project teams (smart working) or permanently assigned team workstations: with Sedus *get together* you have a multifunctional bench solution that satisfies all requirements of modern working.

As flexible as your needs.

get together is suitable for contemporary ways of working as well as for permanent workplaces – no matter in what area or in which global location of your business you need versatility. Whether efficient use of space or encouragement of collaboration: the sophisticated concept of

get together stands for the open space competence of Sedus and fulfils all your employees' expectations. Concentrated work or working together, open exchange or privacy: *get together* simply meets all the requirements of a table.

For 62% of all employees an attractive design of the future office environment is important or very important in a job change.¹

35% of all office hours are now spent on project work at changing locations and in teams made up of employees and external workers, depending on the task.²

61.1% of all companies confirm that routine activities and fixed structures are increasingly being replaced by flexible project work.³

Team spirit can now be easily configured.

Proven. Classic use in the work zone with fixed workplaces, in the configuration example with 1600 mm depth and 3200 mm width.

Flexible. Versatile use in the central zone with space-optimised places for project work and temporary work. The configuration example has a depth of 1600 mm and a width of 2400 mm.

Efficient. Use in country-specific, space-optimised work zones as in the configuration example with 1400 mm depth and 4800 mm width.

Integrative. Use as a meeting table with continuous table top as exemplified here with 1400 mm depth and 4000 mm width.

Restructuring can be so comfortable.

With *get together* the emphasis is on success – even before the first use. Because in development, importance was placed above all on ensuring that *get together* can be simply planned and quickly assembled and reconfigured. An intelligent support beam system with sophisticated interfaces and as few components as possible means that even in the case of moves or redesigns you quickly have everything ideally set up again. *get together* thus increases productivity not only when working, but during assembly or reconfiguration already.

Simple and efficient. See for yourself with our product video: www.sedus.com/en/gettogether/

Practical and personal. With the versatile *get together* accessories, the equipping and design of the individual workplaces can be changed in no time. Whether screening, organisation or individualisation: all workplaces can be designed in the best way for people's well-being – and thus also for their motivation.

Smart working can't get much more intelligent.

Depending on work requirements, available space or desired quality, with *get together* group and team workplaces can be planned and realised as individually as is best for productivity and atmosphere. From the four configuration levels with an attractive price range to the practical accessories for individualisation and the user-friendly integration of data and power cables – *get together* is simply a clever answer to all the requirements of intelligent work.

Versatile. The table top is available in both one-piece and two-piece versions. The two-piece tops offer individual options for the electrical connection.

Useful. Many different accessories can be attached to the multifunction groove without tools. In this way optimal use can be made of the entire length of the table.

Enlightening. The workstation lamp "Ninety" can be moved and turned in an instant.

The lightness of the design. The die cast aluminium A-leg emphasises elegance and individuality in a very special way. Height adjustable via spindle from 720 to 760 mm.

Standpoint. The 4-leg combines stylistically confident design with timeless lines and a reduced form. Height: 740 mm.

Multifunctional screens

Personal space. The magazine provides a privacy screen at the side and at the same time storage space for magazines and all kinds of personal items.

Undisturbed. Whether a rotatable sail or a large shell: the fabric-covered and movable screens offer privacy whilst still allowing communication.

Multifunctional. The shelf can be simply placed at the front end. It functions as a privacy screen and storage space. With its counter-like character it also serves as a contact point.

Exciting. With its smart design the flexibly usable table socket module is an eye-catcher at any workplace.

Clean. The electrical connection panel provides plenty of space for high capacity and hard wired cable management and in its fixed position under the table top ensures a tidy appearance. For flexible vertical cable management an electrical connection unit and cable chains are optionally available.

Organiser and smart box

Practical. The organiser ensures that folders or personal items are always in easy reach. The person opposite profits too: the back serves as a magnet board.

Clever. The smart box is hung on the table top and provides a note file, a pen tray, and in the "power" version – two socket modules as well.

Easy of use. The large grommets at the rear edge of the table provide partial access to the cable tray.

Even more comfortable to easy and intuitive. The electrical connection flaps extend along the entire width of the table and allow optimum access to the whole cable tray.

Sustainability down to the last detail.

Sustainability and quality “Made in Germany” have been key company principles at Sedus for more than 50 years. Principles that Sedus *get together* also embodies and which are reflected in recycling-orientated product design, ecologically tested materials, resource and energy-conscious manufacturing and ongoing quality tests.

Thus, for example, solvent-free powder coating is used in the production of *get together* instead of conventional paint. And the use of selected woods from sustainable, indigenous forestry is also part of the Sedus philosophy of quality and sustainability.

You will find more information at www.sedus.com/en/ecology

Innovative laser edging. Jointless edge processing at the highest level that harmoniously combines durability, beauty and environmental friendliness.

Sustainable and close. Real wood veneers from sustainable forestry nearby are not only fascinatingly beautiful, but also save transport kilometres. See for yourself at: www.sedus.com/microsites/medien/videos/furnierarbeiten

Future ex-works. High quality materials such as melamine make *get together* particularly durable even with multiple reconfigurations – and thus particularly sustainable.

Around the world, Sedus adheres to the principles of the UN Global Compact for human rights, labour standards, the environment and anti-corruption.
